Subject: Bill No 1

To whom it may concern:

After receiving and reviewing a copy of Bill No.1 I wish on behalf of our company Scotian WindFields Inc. to offer or sincere support and express our interest to participate in this opportunity once the legislation is in place and the regulations supporting the Bill are approved. Scotian WindFields Inc. has been a very strong supporter of renewable energy in Nova Scotia and we continue to do our part in not only increasing renewable energy but also diversifying in the source of the renewable energy generation.

While we are best known for our active business presence in the wind industry, through one of our subsidiaries Dr. Solar we have been providing thermal energy as well as electricity generated from Photo voltaic cells. We have installed more solar installations in Nova Scotia over the past twelve months than all other companies combined. Recently we have announced our move into the waste to energy sector through a company called STEC. STEC has been charged with seeking out the best possible technology and implementing that technology here in Nova Scotia and across Canada.

The proposed Bill No1 will provide an opportunity to broaden the market potential for independent power producers but more importantly it will broaden the options energy purchasers (businesses and home owners) have to choose their retail supplier.

Scotian WindFields will be participating in the upcoming public review as well as directly participating in the evolution of regulations as the opportunity is afforded us.

Respectively submitted
